

IMDb-Wiki age regression, INFEASIBLE regime, 5 seeds
tail-500 = mean over the last 500 iterations, then mean $\pm$ std across seeds

Importance-weighted MSE $F_p(\theta)$ (log)

- FedAVOT — tail-500 116.4 ± 0.53
- FedAVOT + CVaR ($\alpha=0.1, \gamma=1$) — tail-500 116.4 ± 0.53
- CVaR, uniform average ($\alpha=0.1, \gamma=1$) — tail-500 108.5 ± 0.67
- Uniform average over K — tail-500 108.5 ± 0.67
- Full coverage — tail-500 83.07 ± 0
